

SEABRIDGE GOLD

RECENT NEWS SUMMARY

- December 12, 2018 **Seabridge Gold Successfully Extends Iron Cap Deposit's High Grade Core Zone Down Plunge to the Northwest**
The remaining drill holes completed this year on the Iron Cap deposit at Seabridge Gold's 100% owned KSM project have confirmed a norther down plunge extension of the high grade core zone originally discovered in 2016. Results include some exceptional widths of gold and copper mineralization with grades exceeding the KSM resource average. Work is now in progress on an updated resource estimate for Iron Cap.
- November 28, 2018 **Seabridge Gold Closes \$14.0 Million Private Placement**
Seabridge closed its previously announced non-brokered private placement of one million common shares of the Company at a price of \$14.00 per share. The issued shares are subject to a four-month hold period in Canada expiring on March 24, 2019. Seabridge has granted a private placee an option to increase the size of the private placement by an additional 250,000 common shares exercisable until December 24, 2018. Additional details below, Nov 9, 2018.
- November 14, 2018 **Seabridge Gold Files Third Quarter Report to Shareholders and its Financial Statements and MD&A**
- November 9, 2018 **Seabridge Gold Secures \$14.0 Million Private Placement**
Seabridge announced today that it has secured a non-brokered private placement of one million common shares of the Company at a price of \$14.00 per share for gross proceeds of \$14,000,000. No commissions are payable on this transaction. The proceeds from this financing will be used to fund general working capital requirements and a 2019 drill program at the Company's 100% owned Snowstorm Project in Nevada.
- October 30, 2018 **Seabridge Gold Drilling Successfully Expands Iron Cap Deposit at KSM**
The first two holes completed in this summer's drilling on the Iron Cap deposit at Seabridge Gold's KSM project have intersected some exceptional widths of gold and copper mineralization with grades exceeding the KSM resource average. Results from another 12 holes are expected in the next several weeks.
- September 24, 2018 **Seabridge Gold's KSM Program Confirms Key Geotech/Reserve Data and Extends Iron Cap Deposit**
Seabridge's Summer program at its 100%-owned KSM Project is meeting its objectives after early delays due to adverse weather and the impact of BC fire season on equipment and labour availability. The 2018 program includes confirmation work to ensure that the project is ready for final feasibility when a partner is secured and exploration drilling to further define the higher grade core of the Iron Cap deposit down-plunge from the existing inferred resource. The confirmation work has consisted of drilling to substantiate our reserve model, waste characterization drilling and geotechnical drilling.
- August 21, 2018 **Seabridge Gold Begins Drilling Quartz Rise Target on Iskut Project**
Last year's drill program confirmed the presence of a gold-bearing intermediate sulfidation epithermal system beneath the Quartz Rise lithocap. The drilling intercepted several narrow, discontinuous intervals of high-grade gold. A subsequent 3D induced polarization (IP) geophysical survey together with detailed geological mapping and sampling of available rock faces indicate that the 2017 drilling may not have been in the correct orientation. New results from cliff face sampling show exceptional gold results that appear to correspond with a favorable IP chargeability anomaly under Quartz Rise.
- August 9, 2018 **Seabridge Gold Files Second Quarter Report to Shareholders and its Financial Statements and MD&A**
